a) typical network evolution
cooperativity
time [timestep / system size]
no rewiring
SD no rewiring
random rewiring p=q=0.5
SD random rewiring p=q=0.5
b) network evolution for random rewiring
cooperativity
time [timestep / system size]
no rewiring
SD no rewiring
p=q=0.5
SD p=q=0.5
p=q=0.1
SD p=q=0.1
c) network evolution for local rewiring
cooperativity
time [timestep / system size]
no rewiring
SD no rewiring
local(same)
SD local(same)
d) network evolution for bridge rewiring
cooperativity
time [timestep / system size]
no rewiring
SD no rewiring
bridge(different)
SD bridge(different)
